

FTD 7000/FOB

Fully Automatic Open Arm Automation System

* Boardband System

* Auto Stacking System

* Automatic Guillotine Cutter and Auto Hemming System

- Performs automatic edge hemming for T-shirts, underwear, and similar outfits.
The interlock with a straight bed or top top feed system has been intergrated with a fully automatic horizontal feeding wide band system and also automatically stacks items after sewing is finished.

Production capacity:

- Average of 14,000 pieces / 9 hours for T-shirt.
- Average of 8,000 pieces / 9 hours for T-shirt skirt hemming.

Benefits:

- * Increase in production quality.
- * Increase in production capacity.
- * Wastage ratio is lower.
- * Eliminates the need for a skilled staff need.
- * The automatic stacking feature eliminates the need for extra staff for stacking.
- * Saves on labor.

Technical specifications:

- * The size of the hemming is preferably within the range of 15 to 25 mm.
- * Suitable for all types of open fabric.
- * With multiple language options and an easy-to-use panel, all settings are easily made.
- * Automatic Trimmer and Hemming System.
- * Wide Band System.
- * Automatic Stacking System.
- * The design is extremely ergonomic.
- * It is very easy to use, the operator inserts the fabric, the system bends the fabric to the bottom of the machine by means of wide bands and starts the sewing process automatically, with the help of the bands the items that are finished sewing are moved to the stacking unit by bands and stacking is done. All this takes place in order and quickly, without the need for skilled worker. production to go.

- * Production is carried out using the best materials and equipment.
